Secura Key Launches Plug-in Wireless Network Module For Popular SK-ACP 2-door Panels

CHATSWORTH, CALIFORNIA - Secura Key announces the availability of a new Wireless Network Module allowing Secura Key's SK-ACP 2-door access control panel to easily connect to a Local Area Network to monitor and control an access control system. This module replaces expensive outboard network adapters, eliminating the requirement for an additional enclosure, cabling and a power supply. The key advantage of the wireless module is that it enables network access in locations where there is no preexisting Ethernet cable, thus providing solutions for challenging installations.

The compact SK-WLS MOD for 802.11b/g plugs directly into the SK-ACP panel (Revision N or later) and receives its power from the panel. To enable access to a local network, the module integrates a fully developed TCP/IP network stack and operating system. The module can be configured remotely over the network. The wireless module can be located using the software provided with any 802.11b/g wireless router. The module uses the Transmission Control Protocol to assure that no data is lost or duplicated and that everything sent arrives correctly at the target.

The wireless module uses the widely accepted 802.11g protocol to connect to the wireless infrastructure, and is it fully compatible with 802.11b wireless networks. The module includes power and status LEDs, and an antenna, which is mounted on the access control panel enclosure.

About Secura Key

For over 35 years, Secura Key has manufactured access control and RFID products, pioneering the use of new card technologies in the security industry. Reader technologies include contactless smart cards, proximity, and other leading technologies. Secura Key's modern card/tag production plant is expert at packaging a wide variety of Access Control and RFID transponders in durable plastic packages, featuring 4-color graphics, custom form factors and encrypted data.

Secura Key's manufacturing plant and general offices are located in Chatsworth, California. Further information on Secura Key is available at <http://www.securakey.com>.
